Experience

Software Engineer @ iFood

Foodtech

OCT 2020 – NOV 2024

I was the only front-end in the team for 6 months and contributed to the delivery of the first version of a much expected Backoffice application, used by Marketing and Product people to customize the app Home layout, based on time and user segmentation. The work consists of refining tasks to application deploy. Contributed to the company's design system by solving bugs. Helped on the onboarding of new colleagues, mentored a person migration from backend to frontend, worked voluntarily in social programs: PROA and FLY.

Tech: React, styled-components, Typescript, Javascript, React Testing Library, Jest, redux, react-query, nx.

Development Analyst @ Venturus

Innovation center, 3rd party for companies

MAR 2015 – OCT 2020

Worked in two projects for multinational companies, starting as backend and becoming frontend. First project was Ericsson, where I worked in a BSS system, both in legacy modules and new ones. Worked in various modules and knew the business logic of the system. Second project was a Backoffice application for the client, and it had a lot of modules with different functionalities and complexities: since simple forms to a sheet editor, Excel-like.

Tech: Started working with C/C++ and changed context, working with: → Java, REST, microservices, Cassandra, Camunda → Angular 4, Typescript, Jasmine, Protractor → AngularJS, JSF, Sass, jQuery, Primefaces.

Intern @ Samsung Electronics

Electronics Tech products multinational

AUG 2014 – DEC 2014

Calibration of radiofrequency circuits, writing of IMEI and execution of tests on phones.

Education

Bachelors in Electrical Engineer @ UNICAMP

Universidade Estadual de Campinas

MAR 2010 – DEC 2014

Scientific research and final course assignment about Electrical Grounding, where I verified the application of grounding rules, measured the grounding resistance using both ohmmeter and grounding-resistance meter to compare their uses.
